

BUILDING MAINTENANCE/QUARTERMASTER

The Department now has a system in place to provide all Fire Department personnel's Personal Protective Equipment and uniforms. If there are any problems with the serviceability of their Personal Protective Equipment or uniforms they are repaired or replaced without any charge to the individual.

Since personnel are now accountable for the security of the equipment they are issued the Department has furnished all personnel with a personal locker to sufficiently secure all of their issued equipment. Lockers have also been made available for personnel to secure their Personal Protective Equipment.

A preventative maintenance program is now in place for all overhead doors and semi-annual inspections are done in an attempt to recognize problems before they start. New equipment was installed on several overhead doors to allow for emergency opening of overhead doors during power outages.

Several improvements were done to Fire Station # 5 at 28 South 9th St.:

- Roof and gutter repairs were done to correct lingering roof leakages.
- The Training Room was rewired and upgraded to allow for internet connectability.
- The ceiling and lighting was replaced in the Training Room due to damage caused from roof leakage.

Several improvements were done to Fire Station # 6 at 2600 Hulman St.:

- The wiring was thoroughly gone through and updated.
- Roof and gutter repairs were done to correct a lingering drainage problem.
- New curbs, sidewalks and driveway apron were installed.

A new Pension Office/Meeting Room was built at Fire Station # 7 at 1300 Ft. Harrison Rd.

A new Haz-Mat Office/Storage area was built at Fire Station # 9 at 559 West Margaret Ave.

Several Fire Stations are now in the process of being painted as the weather allows.

We are currently working on the preliminary plans to begin building 2 new state of the art Fire Stations within the next few years.

The person pictured is: Quartermaster Rick Buddle.
